

Made of steel ST37 / S235JR with flat or T-profile edging

- **F_v** - Load value at constant load in kN/m²
- **f_v** - Deflection value in cm for load F_v
- **F_p** - Load value at concentrated load in kN on an area 200 x 200 mm
- **f_p** - Deflection value in cm for load F_p
- Permissible tension for steel: **1600** daN/cm²
- Safety factor yield point: **1.5**
- Safety factor breaking point: **2.35**
- Minimum grating cover = grating height (not less than 300 mm)
-  Area recommended by the manufacturer. In this area the deflection does not exceed 1/200 of the span and is lower than 4 mm at a migrating concentrated load of daN onto the load charge area 200 x 200 mm at any point of the grating
-  In this area the grating is able to absorb migrating loads of 150 daN onto the load charge area 200 x 200 mm at any point of the grating at a maximum deflection of 1/200 span.
-  In this area the deflection is 4 mm at a constant load of 500 daN/m².
-  In this area the max. deflection is 1/200 of the span at a constant load of 500 daN/m².

GRATINGS WITH MESH SPACING: **33 x 33. 33 x 22. 33 x 11** - load values from the table
 GRATINGS WITH MESH SPACING: **33 x 44. 33 x 66** - load values from the table **minus 5%**
